

Crystallite orientations

Reciprocal-space geometry

Detector pattern

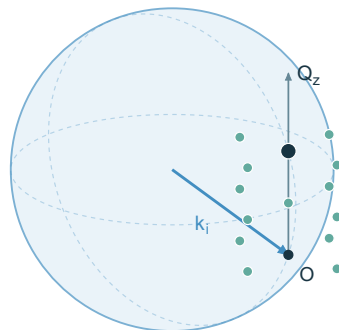

Single crystal

(a)

Fixed crystal axes

(b)

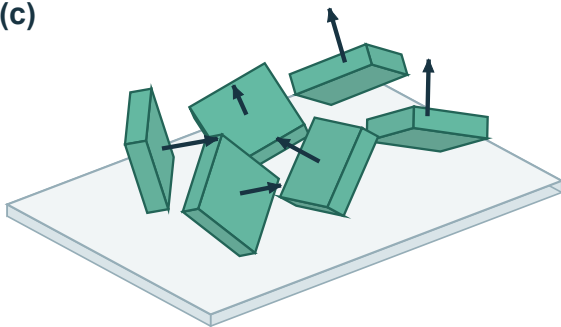

Discrete reciprocal-lattice points

Sparse spots

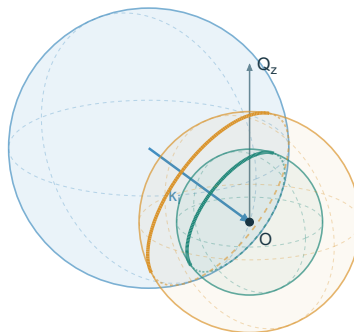

3D powder

(c)

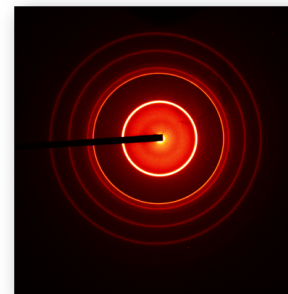

No preferred orientation

(d)

Spherical shells

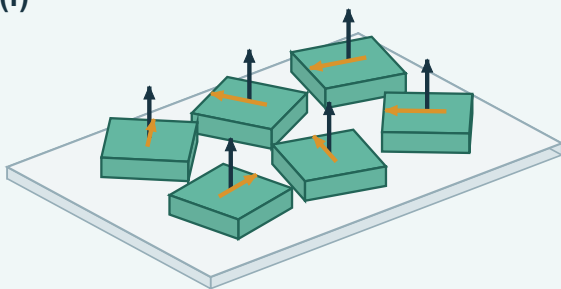

(e)

Debye-Scherrer rings

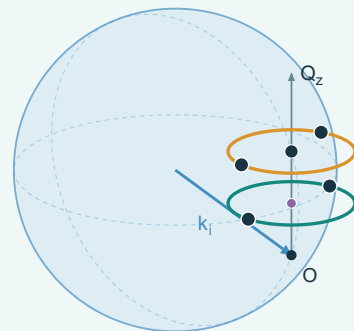

2D powder

(f)

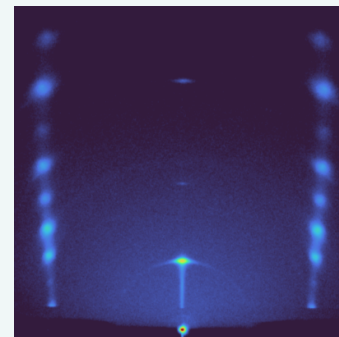

Common film normal

(g)

Rings about the normal axis

(h)

Paired off-specular features
